

Trade Secrets # 2

1. Process a single raw image in Photomatix into a Pseudo HDR picture

2. Save as a 16 bit Tiff

3. Open in Photoshop

4. Create a new layer and apply Shadow and Highlight

5. Reduce noise with Noise Ninja

6. Adjust Curves with blending mode set to luminosity

7. Adjust Levels with blending mode set to luminosity

8. Create a Hue/Saturation layer, blending mode set to colour. Also on the default drop down select sepia

9. Brush through the mask on the hue layer with 20% opacity to reveal some colour

10. Sharpen with high pass and overlay blending mode
